NET, Java, iPhone/Android, and print service providers, as well as printers that work in conjunction with them. Novell partners with leading software companies to distribute and support the Novell-related products. History The Label Generation API (LAPI) is a web service created by Novell to simplify the development of label printers for use with their Novell products. Novell's goal was to make it easy for printer manufacturers to create and distribute label printers, by providing an interface through which to create labels and then the ability to automatically send the labels to a printer. LAPI was created in conjunction with vendors who were building label printers and wanted to quickly enable their label printers to generate labels that could be printed on Novell's network printers. Although Novell wanted to provide the LAPI functionality to desktop systems as well as to printers, the ability to work with desktops was limited. Novell looked to third party developers to write software that would automate the process of printing labels from desktop systems. Novell's LAPI web service was originally created as part of the eDirectory platform. Products and Features labelPROFiler labelPROFiler is Novell's printing product designed to enable the printing of electronic labels using a computer. It's designed to be easy to use and requires no installation. It's considered an essential part of the LAPI web service provided by Novell. The labelPROFiler software can be used to create labels from a variety of sources including data records, web pages, text documents, and more. It has a built-in label designer and can be used to create a label, save the label as a PDF, print it to a network printer, and more. It's bundled with printing drivers for a variety of printers that can be connected to a computer. The labelPROFiler is also available as a plug-in for the popular Borland Delphi development environment and Microsoft's .NET development environment. SmartLabel SmartLabel is Novell's printing product designed to enable the printing of RFID labels using a computer. It's considered an essential part of the LAPI web service provided by Novell. SmartLabel has the capability to be used with any RFID reader and is designed to print RFID labels on demand, using the data the RFID reader provides. RFID readers 82157476af
